The heating capacity value is calculated based on nominal heat output and refers to rooms with a thermal requirement between 0.060 and 0.035 kW per  $\rm m^3.$ 

\*\* Not compatible with HSS kit.

\*\*\* Please refer to the instruction manual for details regarding the installation type.

\*\*\*\* Rear outlet with optional fitting, not compatible with HSS and rotation kits.

Data obtained under laboratory conditions using beech wood with moisture content below 20%. Consumptions may vary according to the dimensions and the type of wood used.
